

## Luxury Portable Shower Units

### Requirements Checklist

- Showers are 1.1 metre square and 2.34 metres high. Access of 1.5 metres is required. Delivery on to your property is by hand trolley. Please ensure the shower will fit where you want it to go including room to tilt shower into position. The showers are 86 kilograms so they can be lifted by two people. Your payment may be lost or extra charges will apply if we can not deliver or pick up due to insufficient access.
- The hot water system must be positioned on a hard level surface. The hot water system must be situated so it is are unable to be tipped over and is away from foot traffic etc.
- 20 metres of drinking quality water hose is supplied to connect the hot water system to a garden tap. Please let us know if extra hose are required.
- The hot water system requires a 10 AMP (General Power Outlet) power outlet in good condition. The hot water system must not share a power point with any other large appliances. Power boards and double adaptors can not be used. We supply a 25 metre lead, tagged and tested for your safety. (Property must have a RCD protected circuit. Please advise us if not)
- Waste water from the shower is diverted on to the garden or lawn. The hose must run away from the shower down hill. If the water is to go in to the sewer line than the entry to the sewer line must below the ground level of the shower unit. Please check with your local council in regards to grey water disposal.
